Aging Hair In recent years new, obscure or poorly known dermatological disorders have been described and better defined, with emphasis on clinical, histopathological and etiopathogenetic features. Familiarity with these new, emerging or revisited clinical entities is fundamental, and recognizing them with their differential diagnosis has important implications in clinical practice for better patient management. This book offers an in-depth discussion of the clinical and pathologic features of newly described or less well-known and revisited cutaneous disorders. It provides clinical findings, as well as the histologic, immunologic, and molecular features of these diseases in addition to therapeutic notes. The first section of the book covers cutaneous diseases that lack any systemic implications, such as circumscribed palmoplantar hypokeratosis, necrotizing infundibular crystalline folliculitis, and dermal hyperneuré, amongst others. The second section offers coverage on cutaneous diseases with systemic implications, such as AESOP-POEMS syndrome, lipoatrophic panniculitis of children, and obesity associated with lymphedematous mucinosis. Each chapter describes an entity, along with an atlas of clinical manifestations that will serve as a “bed-side” clinical reference, followed by a series of photomicrographs depicting the histologic changes. Chapters also offer recent updates on molecular tools helpful in attaining the diagnosis as well as therapeutic recommendations based
upon the more recent acquisitions. New and Emerging Entities in Dermatology and Dermatopathology is a must-have reference for the practicing dermatopathologist, internists, general pathologist reviewing skin biopsies, general dermatologists, family practitioners and nurse practitioners, geneticists, immunologists and other health care providers that care for patients with skin conditions.

Cultural Practices and Dermatoses Hair is subject to either intrinsic (i.e. physiological) aging or extrinsic (i.e. premature) aging that can be attributed to external factors. The intrinsic factors can be associated with genetic mechanisms and are subject to individual variations, whereas external factors include ultraviolet radiation, air pollution, smoking, and possibly nutrition. Leading experts have contributed to this book which offers a practical approach to the evaluation and management of various forms of alopecia, including their pathogenesis, the diagnostic procedures involved, medical treatments, and nutritional issues. A completely new surgical technique for hair transplantation that leaves behind sufficient follicle unit tissue to regenerate hairs is also described. Being comprehensive and easy-to-read, this book should be very useful for dermatologists who wish to diagnose and treat their patients with hair problems more effectively.

Textbook of Primary Care Dermatology This issue of Dermatologic Clinics, guest edited by Dr. Seemal R. Desai of The University of Texas Southwestern Medical Center, is devoted to Therapeutic Hotline: New Developments in Dermatology. Articles in this timely issue address updates in psoriasis, hair loss, nail diseases, photoprotection, melanoma, pediatric dermatology, pigmentary disorders, women’s skin health, acne, atopic dermatitis, bullous diseases; rosacea, and genetic skin diseases.

A Treatise on Topical Corticosteroids in Dermatology This issue of Dermatologic Clinics, guest edited by Dr. Neil S. Sadick, will cover a number of key topics related to Hair. This issue is one of four each year selected by longtime series Consulting Editor, Dr. Bruce Thiers. Articles in this issue include: Clinical patterns of hair loss in men: Is DHT the only culprit?; Understanding causes of hair loss in women; New diagnostic tools to evaluate hair loss; FDA approved treatments for hair loss; Frontal fibrosing alopecia: is it the new epidemic?; Scarring alopecia: diagnosis and new treatment options; Central centrifugal alopecia: challenges and treatments; Alopecia areata: new treatment options including JAK inhibitors; Trichoceuticals; Platelet-rich plasma and cell therapy: the new horizon in hair loss treatment; Energy-based devices for hair loss; Follicular unit extraction for hair transplantation: an update; Automated devices for hair transplantation; and Combination approaches for combatting hair loss.

Dermscopy of Hair and Scalp Disorders When the first edition of this pioneering text was published, only a few dermatologists were trained to utilize the dermatoscope for the diagnosis and follow-up of hair diseases. The technique is now more popular worldwide, prompting the development of this updated second edition, which now includes a section devoted entirely to nail dermoscopy and

Cicatricial Alopecia Being the editor of the book Alopecia, I feel delighted to work with the world-leading publisher IntechOpen Publisher. The current book has chapters emphasizing a variety of alopecias. The administration of newer drugs may treat hair loss by a variety of mechanisms. All the clinical variants of alopecias are discussed in detail. The book will help dermatologists, students, hair transplant surgeons, and physicians related to hair loss problems, giving them the opportunity to understand basic pathophysiological, clinical, and medical management options. The basic idea of the
book is to diagnose alopecia correctly.

**Manual of Gender Dermatology** This book addresses the importance of the physicians’ understanding on how varying ethnic and cultural identities can affect dermatological disease presentation in patients. It bridges the gap in knowledge for practicing dermatologists, especially those not studying or practicing in a highly multi-ethnic center who may not be exposed to patients from a variety of cultures. Concise and cohesive, the book examines how dermatoses can manifest due to cosmetic practices, therapeutics, religious practices, cultural hair-related practices, and environmental variables. These elements underscore that without exposure to patients of varying backgrounds, it can be nearly impossible to learn about practices that may influence a patient's health. There are many examples of cultural practices causing dermatologic lesions, and it is becoming increasingly more likely that practicing dermatologists will encounter patients with these findings as migration, tourism, and public interest continue to rise. Socially conscientious and relevant, Cultural Practices and Dermatoses covers everything from more common cultural practices, such as acupuncture and threading, to lesser known ones, like pew blisters and turban ear, as there is limited medical literature describing their cutaneous effects and complications.

**The Dermatology Handbook** Few dermatologic problems carry as many emotional overtones as hair loss in women, which is by far the most common hair problem encountered in daily clinical practice. Fortunately, a specific diagnosis can usually be established through the application of appropriate examinations and tests, and treatment suited to the diagnosis is likely to control the problem. This comprehensively illustrated monograph provides both specialists and primary care physicians with the practical know-how required for successful management of hair loss in female patients of all ages. The book opens by critically examining various myths about hair loss. The different examination techniques are then described, and the various forms of hair loss and their treatment are discussed in detail. Approaches to follow-up are outlined, and the management of patient expectations is carefully considered. The potential role of hair care and cosmetics is also explored in some depth.

**Alopecia** This issue of *Dermatologic Clinics*, guest edited by Dr. Neil S. Sadick, will cover a number of key topics related to Hair. This issue is one of four each year selected by longtime series Consulting Editor, Dr. Bruce Thiers. Articles in this issue include: Clinical patterns of hair loss in men: Is DHT the only culprit?; Understanding causes of hair loss in women; New diagnostic tools to evaluate hair loss; FDA approved treatments for hair loss; Frontal fibrosing alopecia: is it the new epidemic?; Scarring alopecia: diagnosis and new treatment options; Central centrifugal alopecia: challenges and treatments; Alopecia areata: new treatment options including JAK inhibitors; Trichoceuticals; Platelet-rich plasma and cell therapy: the new horizon in hair loss treatment; Energy-based devices for hair loss; Follicular unit extraction for hair transplantation: an update; Automated devices for hair transplantation; and Combination approaches for combatting hair loss.

**Alopecia** A 23-year-old African Caribbean woman presents in the emergency department with an acute onset facial rash. During initial assessment she complains of a two week history of general malaise, fatigue, fever, and weight loss. You have been assigned her examination

**Atlas of Trichoscopy** Get a quick, expert overview of nail diseases and procedures with this concise, practical resource. Dr. Antonella Tosti covers high-interest clinical topics including anatomy and physiology of the nail, benefits and side effects of nail cosmetics, nail diseases in children and the elderly, and much more. Covers key topics such as nail psoriasis, nail lichen planus, onychomycosis, traumatic toenail disorders, self-induced nail disorders, the nail in systemic disorders, nail disorders in patients of color, and more. Includes basic nail procedures useful to students, residents, fellows, and practitioners. Consolidates today’s available information and experience in this important area into one convenient resource.

**Hair and Scalp Disorders** Dermoscopy - the examination of the skin under special illumination - has been increasing in popularity as a diagnostic investigational method, but the skin containing hair poses rather different problems from the skin on the rest of the body. This pioneering text examines the different conditions that can be investigated and the results that can be obtained. This source contains specially commissioned artwork tables for ease of reference.

**New and Emerging Entities in Dermatology and Dermatopathology** Dermatology clinics are extremely
fast-paced, and while the internet is useful, online resources can slow clinics down as it can often take lengthy amounts of time to obtain meaningful information. Recognizing this problem, Dr. Vashi has developed, over the course of several years, a practical guide targeted towards practicing dermatologists, resident physicians, medical students, family practitioners, nurse practitioners, and physician assistants. The Dermatology Handbook provides clinical information and quick solutions to common problems typically faced by dermatologists in a user-friendly and meaningful way. Designed to fit into a coat pocket, the content is presented as bulleted lists, along with tables and algorithms to allow busy clinicians to find the information they need rapidly. Featuring fill in the blank pages for users to personalize, this handbook is at once both comprehensive and succinct. Chapters include sections on the most common dermatologic complaints, differential diagnoses, laboratory techniques, dermoscopy, dermatologic emergencies, commonly used medications, pediatrics, surgery basics, and cosmetic pearls. Drug tables, guidelines, and algorithms for history taking and treatment approach also work to provide the reader with efficient usability.

Ethnic Dermatology This textbook provides a comprehensive, practical guide to the identification of a range of common dermatological conditions encountered within primary care. It features a problem-based approach to the topics and conditions covered. Clinical photographs, diagrams and pertinent tables along with clear learning objectives, clinical pearls and pitfalls in each chapter facilitate understanding in the diagnosis and management of a range of common dermatological conditions. Textbook of Primary Care Dermatology empowers the reader to develop their understanding of how to deal with a range of common skin, hair and nail problems. It is ideal for training and practising primary care physicians seeking a quick reference guide to use in their clinical practice and the trainee dermatologist seeking a primer on the topic. It is also suitable for other members of the primary care team including nurses, pharmacists, physician associates and clinical assistants, and it is very useful for hospital-based doctors and nurses in other disciplines who want a quick, practical reference to common dermatological problems.

Therapeutic Hotline: New Developments in Dermatology, An Issue of Dermatologic Clinics This issue of Dermatologic Clinics, Guest Edited by Dr. Murad Alam, is devoted to Practice Gaps in Dermatology. Articles in this issue include: Psoriasis and Papulosquamous Disorders; Blistering Diseases; Disorders of the Nails; Disorders of the Hair; Infections; Abnormal Pigmentation; Lupus, Scleroderma, Dermatomyositis; Genodermatoses; Pruritus; Drug Reactions; Dermatoses of Pregnancy; Contact Dermatitis; Acne and Rosacea; Radiation Therapy; Surgery for Skin Cancer; Cosmetic Dermatologic Surgery; Light, Laser and Energy Treatments; and Melanocytic Lesions and Melanoma.

Clinical Correlation with Diagnostic Implications in Dermatology This textbook contains the latest advances and scientific knowledge from the leading experts in hair biology, hair disorders, and clinical trichology. The book consists of ten sections in which hair biology, hair genetics, hair diagnostics, hair loss types, pathogenesis, treatment options, and restoration techniques are discussed. This book also emphasizes on various genetic and nongenetic alopecia types, differential diagnosis, and the measurement of hair loss. One chapter of the book is devoted to natural products for hair care and treatment. We believe that this textbook will serve as a comprehensive guide to many physicians dealing with hair disorders in their clinical practice.

Skin, Mucosa and Menopause A comprehensive resource for the practicing dermatologist on how to diagnose and manage the range of hair disorders in patients. Extensive illustration accompanies each condition and shows the results of the latest diagnostic tools, including dermoscopy.

Moschella and Hurley's Dermatology “ Aged? But he does not appear aged, just look, his hair has remained young!” Marcel Proust, In Search of Lost Time (1913–27) The appearance of hair plays an important role in peoples’ overall physical appearance and self-perception. With today’s increasing life-expectation, the desire to look youthful plays a bigger role than ever. The hair care industry has become aware of this, and capable to deliver active products that are directed toward meeting this consumer demand. The discovery of pharmacological targets and the development of safe and effective drugs such as minoxidil and finasteride also indicate strategies of the drug industry for maintenance of healthy and beautiful hair in the young and old. The study of hair aging focuses on two main streams of interest: On the one hand, the esthetic problem of aging hair and its management, in other words everything that happens outside the skin; on the other hand, the biological problem of aging hair, in terms of microscopic, biochemical, and molecular changes, in other words the “secret life” of the hair follicle in the depth of the skin. Hair aging comprises hair shaft aging, and aging of the hair follicle. The

Page 4/8
former involves weathering and photoaging of the hair shaft, while the latter manifests as decrease of melanocyte function (graying) and decrease in hair production (alopecia).

Hair, an Issue of Dermatologic Clinics Hair Pathology with Trichoscopic Correlations Mariya Miteva, MD, Associate Professor, Dr. Phillip Frost Department of Dermatology and Cutaneous Surgery, University of Miami Miller School of Medicine, Miami, Florida, USA Combining pathology with trichoscopy is a powerful strategy for the optimal management of hair disorders. This highly illustrated text will help clinicians become familiar with how to obtain an optimal specimen and how to understand the pathology report in order to create an individualized approach in management. Pathologists will become familiar with the trichoscopic morphologic correlation of hair disorders, with the diagnostic clues to spot, and the most common pitfalls in hair pathology. CONTENTS: Hair and scalp dermoscopy (trichoscopy): An introduction * Normal scalp and hair on trichoscopy * Practical tips for mastering the scalp biopsy procedure * Introduction to horizontal sections and normal scalp anatomy on horizontal sections * Trichoscopy-guided scalp biopsy * Clues to the pathologic diagnosis of hair disorders * Pitfalls in the pathologic diagnosis of hair disorders * Alopecia areata * Alopecia areata incognita * Telogen effluvium * Androgenetic alopecia * Traumatic alopecia (without traction alopecia) * Lichen planopilaris * Frontal fibrosing alopecia * Fibrosing alopecia in a pattern distribution * Lupus erythematosus of the scalp * Traction alopecia * Central centrifugal cicatricial alopecia (CCA) * Folliculitis decalvans * Dissecting cellulitis of the scalp * Erosive pustular dermatosis of the scalp * Acne/Folliculitis keloidalis * Scalp psoriasis * Seborrheic dermatitis * Red scalp disease * Scalp involvement in dermatomyositis * Linear morphea en coup de sabre * Hair and scalp infections * Miscellaneous * Trichoscopy in the hair transplant practice: An introduction for hair restoration surgeons and pathologists

Dermoscopy of the Hair and Nails Designed for today’s busy family physicians, Dermatology for the Primary Care Provider is an easy-to-use reference covering the diagnosis and management of commonly seen dermatologic conditions. It provides practical, everyday guidance for quick reference at the point of care, including management pitfalls, clinical warning signs, specific treatment recommendations, and much more. Packed with need-to-know information, this unique resource is invaluable both when you are confident in your diagnosis and need guidance on next steps, or when you need step-by-step assistance on initial management in the absence of a definitive diagnosis. Highlights common management pitfalls, how to rule out acutely dangerous entities, and clinical warning signs requiring urgent referral. Provides specific treatment recommendations including which level of therapy is necessary, clear instructions on how to prescribe, and what to watch for. Includes numerous treatment algorithms throughout, as well as a differential diagnosis overview list in every chapter with cross-references to the corresponding page. Contains helpful information on patient education as well as answers to commonly asked patient questions.

An Atlas of Hair Pathology with Clinical Correlations, Second Edition Along with its sister dermatologic volume, this comprehensive textbook of laser technology covers the use of lasers to treat vascular anomalies and lesions, control of pigmented lesions and tattoos, hair removal, acne, facial rejuvenation, Psoriasis, hypopigmented lesions and Vitiligo. Chapters are formatted in an easy to follow format with clear concise sections with bulleted summaries to highlight key points. Lasers in Dermatology and Medicine: Dermatologic Applications provides detailed explanations of when lasers can be of use how to use them across a range of medical disciplines. Clinically relevant examples are provided along with relevant images and summary boxes to highlight key points. It therefore provides a critical resource on the applications and use of lasers across medicine for both the trainee and trained clinician.

The Difficult Hair Loss Patient The aim of this atlas is to provide detailed and comprehensive, easy-to-use information, sufficient to perform trichoscopy in clinical practice. From basics to advanced knowledge, everything in one book. In this sense it is rather an “illustrated textbook” than solely an atlas. It includes evidence based information, acknowledged algorithms, which help easy diagnosis and “take home messages”, which aid memorizing specific features of diverse diseases. The atlas consists of two major parts. In the first part the authors describe structures and patterns seen in trichoscopy. The second part consists of detailed description of characteristic trichoscopy features of diverse diseases of hair and scalp. Consecutive chapters illustrate genetic hair disorders, acquired hair loss and scalp diseases.

Atlas of Dermatology Richly pigmented skin is the most common skin type internationally Historically,

dermatology has focused on white skin. But rich pigmentation can lead to differences in presentation, disease course and outcome, and reaction to treatment. Some dermatologic conditions are seen predominantly or only in richly pigmented skin. Ethnic Dermatology: Principles and Practice provides a practical approach to the dermatology of non-white skin. Written from a global perspective to include Asian, African-Caribbean and North African skin types, it covers all the bases of dermatology including: Grading scales in dermatologic disease Pediatric dermatology Dermatology and systemic disease Drug eruptions Hair and scalp disorders Cosmetic dermatology With a central focus on practical action from an international cast of authors, Ethnic Dermatology: Principles and Practice gives you the clinical tools you need when skin colour matters.

Nail Disorders This is the first and only book on the diagnosis and treatment of cicatricial alopecia, written by leading experts in the field. This highly illustrated and practical text helps residents and practicing dermatologists to accurately diagnose and treat the scarring alopecias.

Alopecias - Practical Evaluation and Management Treatment of hair disorders has progressed considerably over time. More patients are now interested in hair care and some are bombarded by promising advertisements. In reality, hair disorders may be complex and require accurate diagnosis for suitable treatment. Hair Loss and Restoration provides an extensive look at the practical management, both medical and surgical, of all forms of hair loss. Proper examination of the patient with hair loss is discussed in depth as is androgenetic alopecia, the most common cause of hair loss. The autoimmune disease alopecia areata is examined comprehensively, including its pathogenesis, clinical features, differential diagnosis, and treatment. This edition also covers new developments on the diagnosis and treatment of the disease. Hair loss from drugs and radiation is reviewed along with other topics such as telogen effluvium and frontal fibrosing alopecia—an increasing concern in scarring hair loss. Hair restoration surgery is described in detail and an excellent review of what is available from a nonmedical approach to hair loss is provided. Extensively referenced and illustrated with more than 300 clinical color photographs, this compact and easy-to-read book is a valuable resource for both doctors and patients.

Practice Gaps in Dermatology, An Issue of Dermatologic Clinics, E-Book Dermatology Training: The Essentials helps readers understand what is required to work effectively in a demanding clinical dermatology training programme. Developed by the British Association of Dermatologists and British College of Dermatology, this accessible textbook covers all key themes outlined in the 2021 Joint Royal Colleges of Physicians Training Board (JRCPTB) curriculum. The fundamentals of professional development, clinical practice, general dermatology, therapeutics and procedural dermatology, and specialist areas of dermatology relevant to all UK and international trainees and healthcare professionals are addressed in 29, reader-friendly chapters. Throughout this highly practical textbook, the expert authors provide tips and advice for handling common clinical situations, developing leadership skills, getting into research, gaining surgical experience, as well as key pearls and pitfalls. The book contains over 70 Specialty Certificate Exam (SCE) questions to assist in exam preparation, and includes contributions from current trainees that offer real insights into day-to-day dermatology training. A must-have for all those involved in the dermatology training process, including educational supervisors, this textbook: Provides detailed descriptions of the key themes and targets that trainees in dermatology need to understand Features numerous images of disease presentations in various skin types, and highlights relevant issues relating to skin diversity Aligns with the new Capabilities in Practice (CiPs) assessment tool which evaluates the trainee’s ability to deliver and perform in the workplace Dermatology Training: The Essentials is highly recommended reading for all trainees in dermatology, doctors taking the Certificate for Eligibility for Specialist Registration (CESR) route to accreditation in dermatology, General Practitioners training to have an Extended Role (GPwER), and junior doctors and medical students considering a career in dermatology.

Dermatology Training An era of global population aging is upon us. By 2030, one in eight people will be over age 65. Since women generally live longer than men, the health and welfare of postmenopausal women will become a significant public health concern. This book offers a comprehensive review of the life changes associated with menopause, both at the dermatological and physiological level (e.g., hormonal, immunological) and at the subcellular level. It critically examines the dermatological, biological, and clinical challenges to postmenopausal health and well-being and the current and emerging therapeutic interventions. The authors advocate a holistic approach, emphasizing the need to view the menopause as a life transition with various facets rather than as a series of distinct medical conditions to be managed. Our goal is to offer a comprehensive resource to the
researchers, clinicians, physicians, and helping professions whose mission is to promote the health and well-being of women around the world.

Hair Pathology with Trichoscopic Correlations The Manual of Gender Dermatology is a research-based guide to the mechanisms of gender differentiation for common dermatologic conditions. Key topics include hormonal differences, genetic background, gender psychology, environmental effects, and a wide range of skin disorders that may have a gender bias. Written by experts in the fields of dermatology and cutaneous biology, this is an essential resource for practicing dermatologists and family practitioners, as well as for physician extenders, nurses, and students.

Female Alopecia A lavishly illustrated guide to almost 200 inherited diseases of the skin, hair, and nails. Each entry includes synonyms, age of onset, clinical findings, complications, course, laboratory findings, diagnosis, therapy, and key references, adding up to far more than just a collection of photographs. In addition to being a clinical primer, this is also a work of scientific research and contains the first printed description of two new syndromes. The fast-moving world of genetic research means that the latest genetic correlations, included here, render previous texts out of date. All specialists in Dermatology and Pediatrics should find this an invaluable front-line resource in the clinic.

Hair Disorders This lavishly illustrated guide from experts will enable practitioners to get the most out of dermoscopy for investigations and treatments in general dermatology.

Hair, An Issue of Dermatologic Clinics, E-Book This book details the histologic clues in diagnosing the inflammatory dermatoses and neoplastic process of the vulva. The inflammatory dermatoses are divided into histologic patterns to aid recognition. Expert authors provide updates on ancillary techniques such as special stains, immunohistochemistry and chromogenic in situ hybridization when applicable. New advances in classifying squamous lesions as well as staging melanocytic lesions are outlined. They include the recent CAP/ASCCP (College of American Pathologists and the American Society for Colposcopy and Cervical Pathology) lower anogenital squamous terminology for HPV-associated lesions and the 2009 AJCC (American Joint Committee on Cancer) staging system for melanoma. New advances in molecular findings and potential targeted therapy are discussed for the squamous, melanocytic, adnexal and soft tissue tumors whenever it is pertinent. Vulvar Pathology will be a useful diagnostic guide for general pathologists, pathology trainees, dermatopathologists, dermatologists, and gynecologic pathologists in rendering diagnoses in vulvar inflammatory dermatoses as well as melanocytic, squamous, adnexal, and soft tissue neoplasms of the vulva.

Dermoscopy in General Dermatology

Dermatology for the Primary Care Provider E-Book Diagnosing and treating hair disorders is still a subject that is rarely or only superficially covered in residency training. Hence, dermatopathologists and clinical dermatologists often find a gap in their knowledge. A new edition of an acclaimed text, An Atlas of Hair Pathology with Clinical Correlations, Second Edition bridges this gap and serves as a primer, an atlas, and a reference. Features: Supplies basic information on anatomy Examines clinical features that provide a clinical / pathological correlation Details the practical processes of evaluating specimens Includes new photographs demonstrating basic and advanced histologic features of hair disease Explores several new diagnoses Disorders in this edition include senescent balding, loose anagen hair syndrome, psoriatic alopecia, and psoriatic alopecia, and chemotherapy-induced alopecia.
The book also contains a glossary of terms related to hair pathology.

Hair Loss and Restoration: This treatise aims to fill up the lacuna and to contribute significantly to the dissemination of knowledge about the indication/contraindication, mechanism of action, ethical use, side-effects and various other facets related to topical corticosteroid. Topical corticosteroids (TC) have greatly enhanced dermatologists’ ability to effectively treat several difficult dermatoses. The available range of formulations and potencies allows them to flexibly treat all groups of patients, different phases of disease, and different anatomic sites. Improper/incomplete knowledge about topical corticosteroids’ mechanism of action, indications, classifications, and contraindications has produced a rapid rise in the incidence of improper use of these drugs, which could potentially bring disrepute to this entire group of amazing drugs. Responsibility for disseminating proper knowledge regarding when, where, and how to use TC both to internists and patients primarily rests with dermatologists. In this regard, the benefits of rational and ethical use and the potential harm of overuse and misuse for nonmedical, especially cosmetic purposes, should be clearly conveyed before prescribing TC.

Hypotrichosis—Advances in Research and Treatment: 2012 Edition: You could read every textbook available on hair growth and disorders, and still not be able to treat hair loss effectively. In every art, there are many techniques, but few principles. The only way to achieve success is to have a firm foundation of principles to build upon, and the right attitude about how to achieve your goals. This book offers a detailed guide that goes beyond the technical aspects of trichology and evidence based medicine, providing specialists and primary care physicians experienced in the basic management of hair loss with the additional know-how they need to master the ultimate challenge of difficult hair loss patients. First, the prerequisites for successful management of hair loss are reviewed—basically, making a diagnosis and understanding the patient and his or her problem. Then, guidelines on the management of difficult dermatologic conditions and of psychopathological disorders associated with hair loss are provided. Lastly, important aspects of follow-up are covered—specifically the problems of adverse effects, patient non-compliance, and their management—before concluding with exemplary case studies of successful treatment of alopecia and related conditions.
